The Physiological Screening Test (PST) Manual for Eating Disorders/Disordered Eating Among Female Collegiate Athletes was developed after several years of research by a team of qualified professionals, who is well-aware of the psychological, physical, and nutritional world of the female athlete—a team with many years of experience in psychology, athletic training, sports dietetics, and statistics. Developed for athletic trainers and sports dieticians to use with their collegiate athletes to identify those student-athletes who may be at risk for eating disorders or disordered eating, the PST is the first screening instrument available to the practitioner that is specifically designed for athletes. Note: The Physiological Screening Test spreadsheet is included on the CD inside the Physiological Screening Test book.

Instructions are provided within the book for submission and scoring of your form. There is a charge for the scoring of your submissions. Those charges will be provided by the administrator.
