The second edition to this successful textbook is for all physiotherapy students and newly qualified physiotherapists working in orthopaedics at both undergraduate and postgraduate levels. The authors have drawn on their many years of experience and clinical work in various orthopaedic settings to help students with clinical reasoning when faced with apparently diverse patient problems. The content of this book moves from normal to abnormal and from simple to complex. Case studies and self-assessment sections encourage participation by the reader to help students develop a reasoned and logical approach towards the management of their orthopaedic patients.
